WORK METHODOLOGY

ANALYSIS

Analysis is the first and most important step for any project. This process is initiated with discussion and a few queries to figure out the nature of the desired project and objectives. We too, analyze the design and functionality of the project that the client has visualized. Analysis helps in creating a basis for other work processes.

STRATEGY AND PLANNING

On the basis of requirements and objectives, a framework is derived and presented to the client. A detailed discussion is held to figure out if anything is to be added, improvised, or removed. Here we derive a final outline of design and functionality, develop strategy, and create work plans and schedules for mobilizing manpower and resources.

DESIGN AND DEVELOPMENT

As per the finalized strategy and plans, we proceed towards building the project. Our professional designers and developers use every possible technology to deliver 100% result.

STRATEGY AND PLANNING

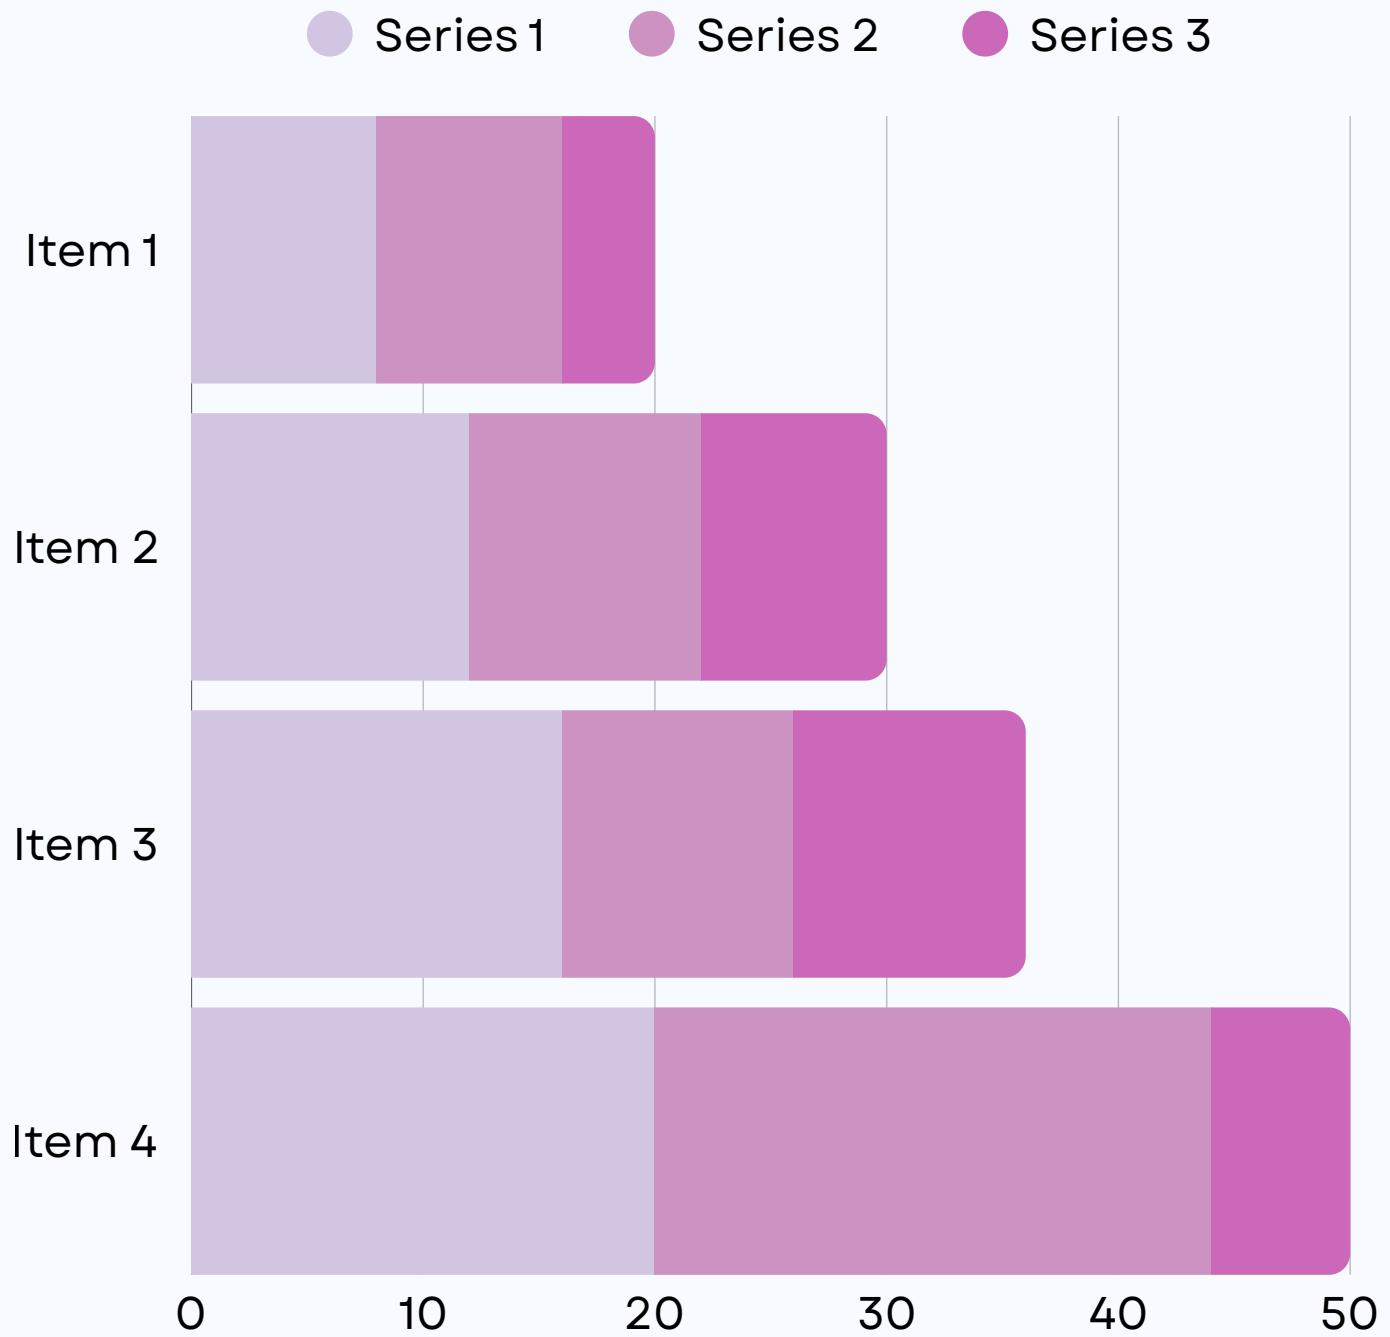

Following the design and development work, we undergo testing or observation from our side and then provide a demo copy to the client for the same purpose. This helps in figuring out any inaccuracies if present. After amending all the errors and weaknesses, if present, the deployment or delivery of the project is done.

MAINTENANCE AND UPGRADE

We have a separate team of experts who provide reliable support for the maintenance and upgrade of our projects. The team works to avoid errors and breaches and ensure that the products are up-to-date with the latest technology and deliver effective and efficient output with excellent performance.
